# my work in general

# today's topic

# focus of inquiry

- ▣ Whole populations

- ▣ Bounded groups with known members

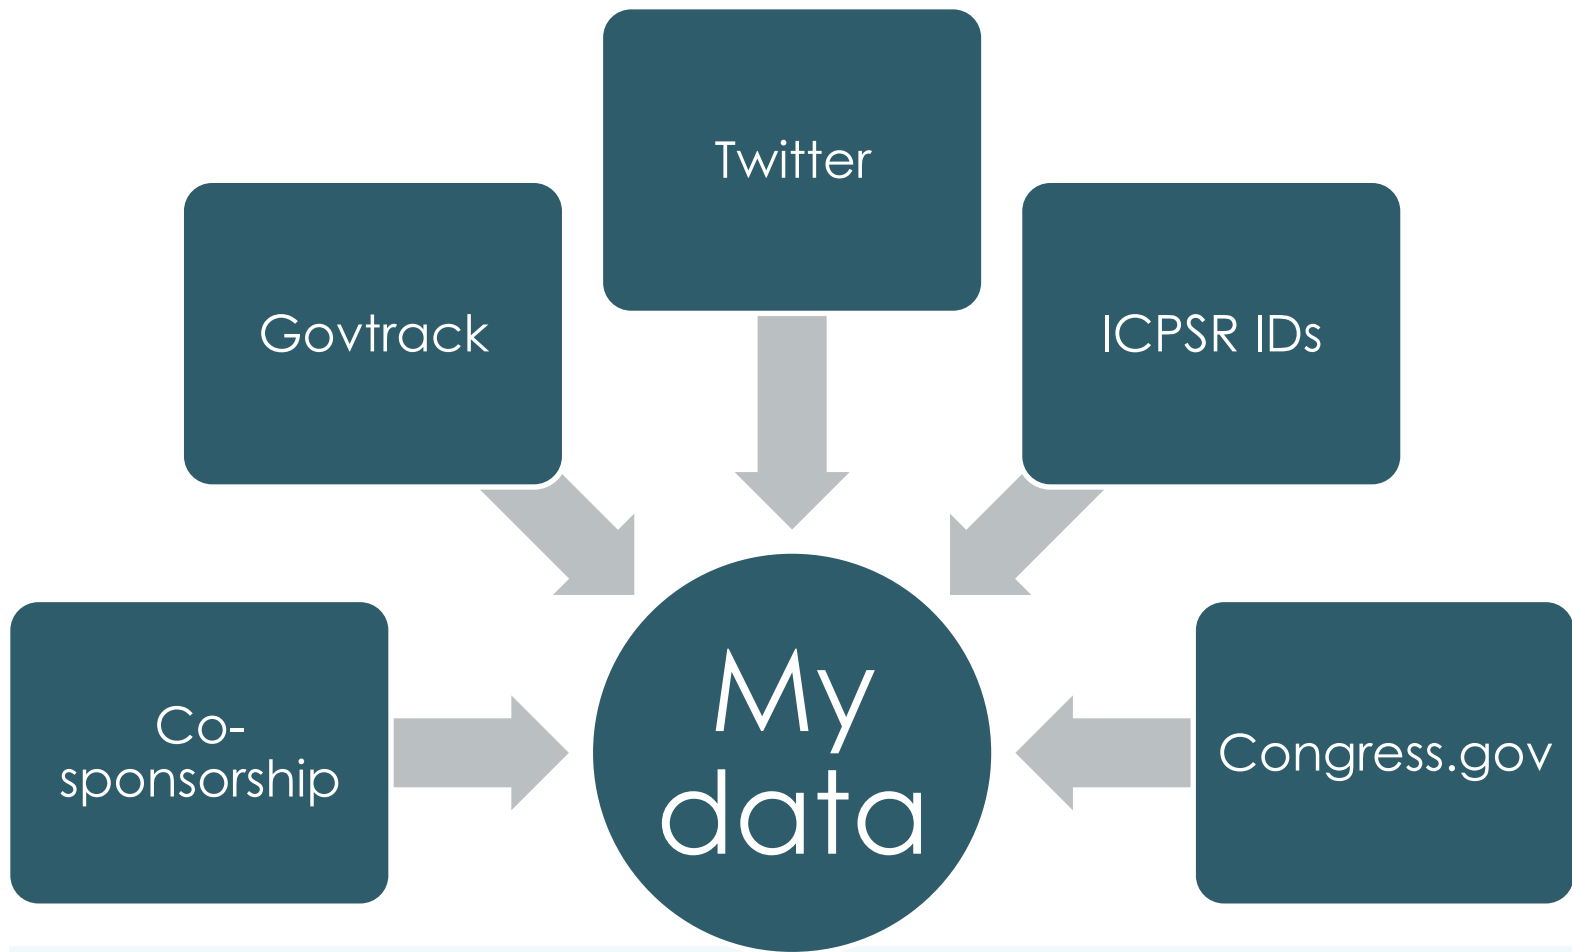

# connecting disparate data sources

Does social media provide  
an alternate route to  
influence?

Nope.

# data sources

First, fast movers control the discussion.

The same people wield  
influence **online** and **off**.

# who's influential online?

Person	Normalized Connectedness
Speaker John Boehner (R-OH)	1.00
Rep. Kevin McCarthy (R-CA)	.99
Rep. Darrell Issa (R-CA)	.94
Rep. Paul Ryan (R-WI)	.91
Rep. Steny Hoyer (D-MD)	.91
Rep. Tim Griffin (R-AR)	.91
Rep. David Cicilline (D-RI)	.88
Rep. Bob Latta (R-OH)	.88

# what's my point?

- ▣ Social media data is most useful when we connect to other data sources.
- ▣ Social media is not an alternate route to influence for politicians.
- ▣ Male-ness and Republican-ness are still the most reliable routes to power.

# a call to action

- ▣ Respect expertise beyond the technical
- ▣ Educate students to be adequate coders and outstanding theorists

# Thank you

- Who said it first – Congress or the press?
- How do constituents lobby Congress via Twitter?
- How can we measure the impact of online protests like #stopthensa?
